ASTRA FEMINA

LEE GARVERICK

Lee Garverick is a retired software engineer, product manager, marketer, and entrepreneur. Having spent over three decades in Silicon Valley, Lee has worked in almost every department typically found in a technology startup. She led projects ranging from safety in space to Internet of Things to education. Lee held leadership roles at Index Engines, LeoLabs, Inseego IoT and DMS, Nexsan, Connected Data, Ricoh eWriter Solutions, Groupvine, HP, and a joint venture between Apple and IBM called Taligent.

Lee also ran a boutique technology marketing company for over ten years, a career option that gave her the flexibility she needed for her three young children. Her company served Silicon Valley clients ranging from nascent startups to HP and Sun Microsystems.

Lee began her career writing educational computer games for the Apple II at a startup in Berkeley, California. She still has boxed copies of her published product, a game for young children marketed by McGraw Hill, Macy's and others.

Passionate about STEM education, Lee serves on the board of her local chapter of American Association of University Women, supporting their Tech Trek STEM camp. She has volunteered for many educational organizations and helped launch a charter school that is now in its 20th year of operation. As a hobby she founded a small business that offered products and a guidebook for organizing fundraiser walkathons.

Lee is a proud Aggie with B.S. in Computer Science and Mathematics from UC Davis.
